

Splitr Pay & Split Bills on Stellar

Splitr is a stablecoin-based payment and bill-splitting app on Stellar, built for communities, small businesses, and groups in Indonesia. Group expenses, savings circles, community funds, and recurring bills become transparent, fast, and recorded on-chain — no more manual bank transfers. This brief is prepared for the Idea Submission stage of the Stellar Journey to Mastery program.

50	20+	2
Target users (Blue Belt) grown from close circles	Mainnet users (Black Belt) real transactions on mainnet	Priority categories Payments + Stablecoins

I. The Problem

1. Group payments are messy

Splitting and collecting money within a group is manual and **error-prone**. People send bank transfers one by one, struggle to track who has paid, and fill chat threads with "already transferred" messages that lack clear proof.

- Shared meals, trips, and group gifts are tracked by hand in notes or chats.
- Savings circles and community/neighborhood funds are opaque and prone to miscounts.
- Small businesses struggle to bill and receive payments cleanly.

II. The Solution

1. One app to split & pay

Create a group, split a bill automatically, and settle payments with a stablecoin on Stellar. Fast, extremely low-cost, and every payment is recorded transparently on-chain — ending disputes over who has paid.

III. Target Users

1. Indonesian groups and communities

- Friend groups: shared meals, trips, group gifts.
- Savings circles and community/neighborhood funds that need clean records.
- Small businesses (shops, services) that need simple billing and payment collection.

IV. Core Features (Staged by Belt)

1. MVP GREEN BELT

Create groups, add members, split bills (evenly or custom), mark as paid, payment history.

2. Growth BLUE BELT

Notifications, payment requests, and a simple dashboard for group owners.

3. Scale & Mainnet

BLACK BELT

Automated recurring bills, small-business features (simple catalog/invoice), and launch on Stellar Mainnet.

V. Why Stellar

1. Built for everyday small payments

Transaction fees are extremely low and settlement is fast — ideal for small, daily payments and group splits. Stablecoin and Anchor support enable future Rupiah on/off-ramps. Fits two program priority categories: Payments and Stablecoins.

VI. Growth Model

1. Natural group-driven growth

The product is used in groups, so every user brings their group members along. The growth path follows the program stages:

- Start with close circles: friends, family, one or two local shops.
- 50 active users to meet the Blue Belt requirement.
- 30+ new users and 20+ real mainnet users for the Black Belt.

VII. Long-Term Vision

1. From bill-splitter to community wallet

Grow into a community payment wallet for the Indonesian market, with Rupiah on/off-ramps via Stellar Anchor. A strong candidate for the InstaAward (up to \$15,000) and the Stellar Community Fund (up to \$150,000).
